All Included Project just download zip and run .Modules and dependencies included in zip .

To run frontend move to client directory by command "cd client "in terminal , then enter command in terminal npm start .frontend will start to run at localhost:3000 .

To run backend be in the entire project directory and just enter "nodemon server.js" or node server.js that it it will start to run backend.

Database in to be imported in the MongoDb compass Gui to see frontend or issue can be faced i.e frontend can be blank if not imported json file. And create collection "CarProject" same as it is or copy this and create the collection or collection name can be edited in url in db.js file. And use your required name.
